ICE ALERT DISPLAY

# DYNAMIC ICE ALERT DISPLAY

## » Warning the surrounding area

Temperatures near freezing combined with humidity can cause ice formation. The risk of propelling ice fragments arises. It is needed to warn the surrounding area for the safety of the public.

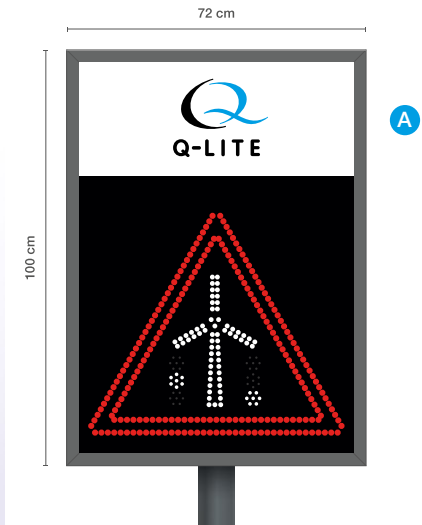

Therefore Q-lite has developed the Ice Alert Display. A smart and dynamic display with Ultra Bright Red and Ultra Bright White LED's.

<b>Housing</b>	Double-walled aluminum extrusion, powder coated.
<b>Dim-function</b>	Automatic brightness control
<b>Power supply</b>	12VDC, 24 DVC or 230 VAC

The Ice Alert Display is connected to the windmill. When the windmill detects ice, it sends a digital signal which activates the display. The signal goes through a wireless or wired connection (see figure).

At times when there is no risk, the sign does not draw any unnecessary attention. A separate temperature sensor on the display is optional.

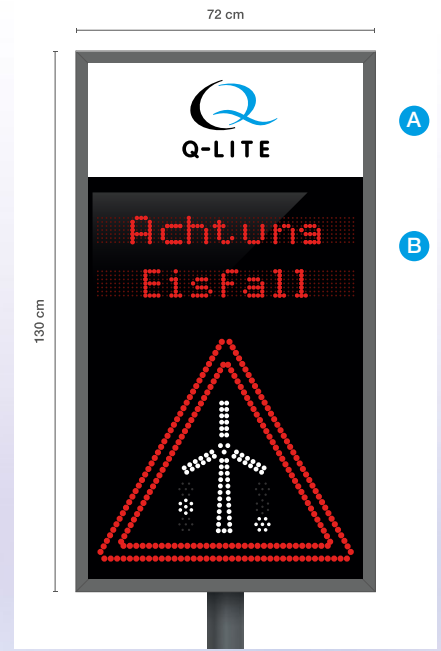

**TYPE 1**

**TYPE 2**

**TYPE 3**

- A** Logo or text in vinyl
- B** Two rows of fixed text in LED (max. 8 characters per line)  
Available in all languages

» Optional

Solar panel for power supply

Rotating warning light

Temperature sensor
